**Porcelains shaping the future in
the pursuit of sustainable design.**

We are aware of the importance of design and longevity in sustainability, aiming to leave a more livable world for future generations, going beyond conformity to trends. With this awareness in our sustainability journey, we have reshaped porcelain to utilize global resources in a sustainable way. While contributing to a circular economy in the fight against climate change, we consider it our duty to minimize environmental impacts in our business processes and add value to nature.

In 2021, by evaluating our process-based waste:

- 92% of the total 311 tons of waste generated at Porland Porcelain from production processes, equal to 289 tons, was recycled.
- Recycling 40 tons of plastic prevented the emission of 656 tons of greenhouse gases and saved energy equivalent to 640 barrels of oil and 92,384 kWh. The non-disposal of plastic waste saved 368 m3 of storage space and reduced fuel consumption and vehicle emissions for waste transportation.
- Recycling 89.5 tons of paper prevented the emission of 656 tons of greenhouse gases containing carbon dioxide, ensuring the continued production of 1,109,800 m3 of oxygen. This saved the equivalent of the oxygen needs of 3043 people provided by 1521 mature trees, resulted in a monthly water saving of 2864 m3 consumed by 268 families, and saved 156,625 liters of fuel oil consumed for heating by 179 families. Additionally, it saved 366,950 kW/h of electricity, equivalent to the consumption of 1790 families for one month.

Since 2005, we have been contributing to the preservation of natural resources and the reduction of global warming by producing designs with a 100% focus on recycling. Through savings obtained from raw materials, we have increased our recycling volume while conducting activities in line with environmentally friendly production and the zero-waste philosophy, without compromising on quality. With our RE-GEN series, brought to life through the recycling of porcelain fragments, and our Research and Development department creating a unique product range, we have not only reduced our carbon footprint but also pioneered a vision sensitive to climate change. Continuing to set an example for environmental sensitivity, so

Vitrifizierung und Brennen

Vitrification et Cuisson

Grâce aux processus de vitrification qui rendent la structure de la porcelaine dense, forte et imperméable, nous portons sa durabilité à son niveau maximum avec un taux d'absorption d'eau de 0 % sur les surfaces non émaillées sous vide. Avec nos formules de vernis transparent SR01 et vernis mat SR03, qui offrent une protection supérieure et empêchent les rayures causées par des minéraux d'une dureté de 5,5 sur l'échelle de Mohs, nous préservons la surface de nos produits.
